DETAILED ACTION

1. This office action is in response to the amendment filed on 12/13/04.

Allowable Subject Matter

2. Claims 1-44 are allowed.

Applicants have amended the claims in compliance with the office action dated 10/13/04. Upon further consideration, claims 1-44 are allowed. The present invention relates to method and apparatus for producing time-hopping codes whose spectral density is low at a predefined frequency. Prior art of record, taking individually or collectively, fails to fairly teach such method and apparatus, as claimed, including "positioning pulses within a specified time layout in accordance with one or more codes to produce a pulse train having a predefined spectral characteristic, wherein a difference in time position between adjacent pulses of said pulses positioned to produce said predetermined spectral characteristic differs from another difference in time position between other adjacent pulses of said pulses positioned to produce said predetermined spectral characteristic" in independent claim 1 and similarly in independent claims 14, 17, 20, 23, 42 (claims 2-13, 15-16, 18-19, 21-22, 24-41, 43-44 depend therefrom). Thus, claims 1-44 are found to be novel and unobvious over prior art of record.
